Setting up Web folders for Windows 7

- In “Computer” Right-Click an open area on the right side of the Window, then select “Add a Network Location”.

- The “Add Network Location Wizard” will appear. Click “Next”.

![Image of Windows 7 Computer window with right-click menu expanded showing Add a network location option]
When asked, “Where do you want to create this network location?” select Choose a custom network location. Click “Next”.
For “Internet or network location” enter
https://filespace.brooklyn.cuny.edu/webfolder/email-ID or
https://146.245.200.70/webfolder/email-ID where your email-ID is your email

Example :https://filespace.brooklyn.cuny.edu/webfolder/MaryL

• Click “Next”.
• Enter your User Name (brooklyncollege\email-ID) and Password when prompted.

• When asked, “What do you want to name this location?” enter a label of your choosing (for instance “My Docs Online”). Click “Next”.
When you see “Completing the Add Network Location Wizard” Check the box “Open the network location when I click Finish” and Click “Finish” (it may take some time for the Web Folder to open the first time).
• A Network Location has been created in the “Network Location” section of Computer with the label you choose. (Hint: You can Right-click the Network Location and select “Send to... Desktop” to create an additional shortcut on your desktop. You can also do this for one or more specific folders inside your My Docs Online web folder).
